

Exploratory Data Analysis

This analysis examines how mobile specifications relate to price category.

Records: 1,104

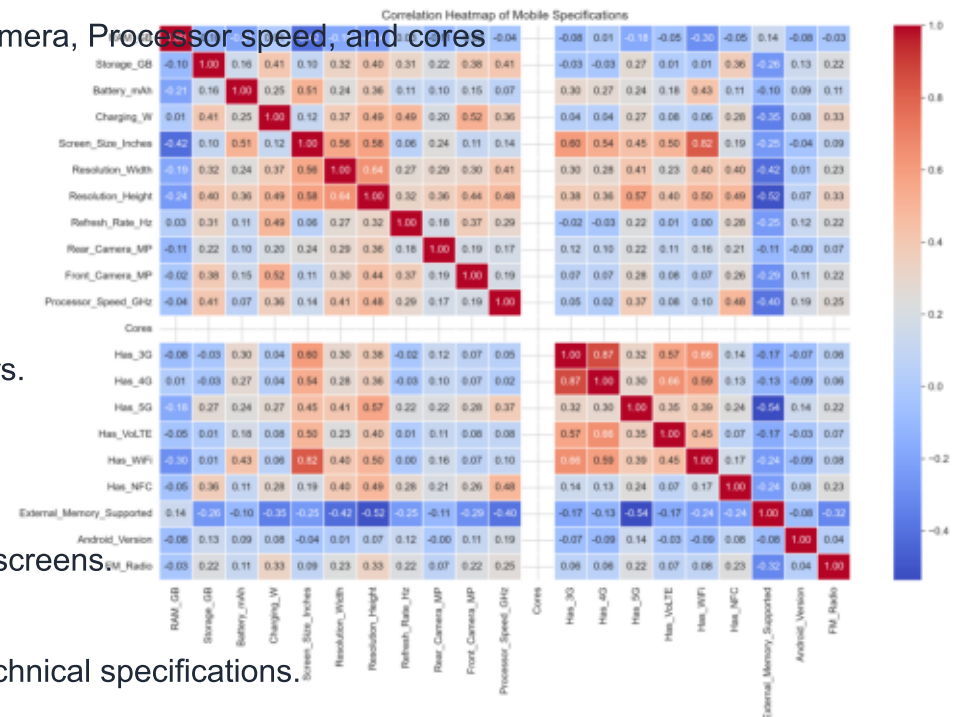

Features reviewed: RAM, Storage, Battery capacity, Display size, Camera, Processor speed, and cores

Target variable: Price_Category

Key observations

Price groups: Below 15,000, 15,000-29,999, 30,000 and above

- Higher RAM and storage generally align with higher price bands.
- Battery capacity and fast charging increase in premium segments.
- Premium models tend to have higher camera resolution and larger screens.
- The strongest relationships are seen between price tier and core technical specifications.

Specification trends by price category
